

Why Natural Green?

- The Natural Green Series actually illuminates white.
- When the bulbs are submerged in the water, they reflect off the microorganisms creating a natural green glow.
- The illumination of these microorganisms attract small bait fish, which in turn attract larger predator fish to your light!

Before You Buy

- Our Natural Green Series is available in 175 watt and 250 watt systems.
- Choose the wattage you would like by considering the clarity of your waterway as well as the amount of light you would like on the surface.
- The 250 will create a larger diameter circle on the surface of the water than the 175 watt systems.

Warning!

If for any reason the system should cease to function, disconnect the unit immediately as a safety precaution, then call 855-FISH-LIGHT.

DO NOT press the reset button on the GFCI plug.

Extend the Life of Your System

- Your system should run continuously each night for optimal results and self-cleaning. A minimum of eight hours per night is required to keep growth off the bulb.
- The bulbs must never be illuminated out of the water. They run the risk of overheating.
- Wire shield is the best way to protect against knicks in the wire caused by fish hooks or other aquatic life. Nicks in the wire are considered damage and not covered under the three-year manufacture warranty. You can purchase wire shield through our website.

Thank you for your purchase!

We know you have many choices when it comes to underwater lighting, and we appreciate you choosing us!

What's in the box?

HID Light System including connected control box, GFCI plug, and light assembly.

5lb Weight

Photocell

Safety Disclaimer

We take every precaution to ensure that we are offering a safe and reliable product. Our lights include a built-in GFCI plug and are required to be plugged into a GFCI outlet at all times. Even with these safety features in place, we must insist that you do not swim around these lights while they are plugged in. This is true with any 110 volt lighting system. While the lights are designed and tested to shut down if there is any interruption of the power supply, the possible risk of shock/ injury/death is too great to take a chance. Please unplug the system(s) before entering the water. The manufacturer/designer/seller of this product is not responsible for any injury/death/damage to property caused by the use of this product. Take any and all safety precautions when using this product. This system must be plugged into a UL approved GFCI outlet. The purchaser agrees to the above by purchasing this system. If you do not agree to these terms, please call us promptly to return your system for a full refund.
